Editorial

Abstract

The quote holds true because whenever we select a topic for research, in that particular area or subject, our knowledge is incomplete and problems are awaiting to be solved. We address the void in our knowledge and those unresolved problems by asking relevant questions and seeking answers to them. The role of research is to provide a method for obtaining those answers by studying the evidence within the parameters of the scientific method.

Acknowledgments and Source of Funding

The Council humbly welcomes suggestions and feedback from the readers as these will certainly help us think better and move ahead on the path of promotion of Homoeopathy through various research activities.

EDITORIAL

If we knew what it was we were doing, it would not be called research, would it?

- Albert Einstein

The quote holds true because whenever we select a topic for research, in that particular area or subject, our knowledge is incomplete and problems are awaiting to be solved. We address the void in our knowledge and those unresolved problems by asking relevant questions and seeking answers to them. The role of research is to provide a method for obtaining those answers by studying the evidence within the parameters of the scientific method.

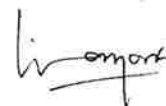

Appreciating the very sensitivity and significance of the word 'research', this journal entails the research studies which have been carried out as per set protocols and peer-reviewed by various experts of the concerned subjects.

The journal is the outcome of one of the hard works of the Council to update the readers with the latest homoeopathic research work done in different areas.

Inside, you will find the fundamental section of this issue which discusses the

'Homoeopathic drugs Natrum sulph and Carcinoin in prevention of azo dye-induced hepatocarcinogenesis in mice'. 'A multicentric double blind homoeopathic pathogenetic trial of Mimosa humilis', 'Quality assurance of raw drug Euphorbia hypericifolia through microscopic studies' and 'A multicentric clinical verification study of Tarentula hispanica' will prove to be beneficial for the readers. Besides, articles on 'Treating benign prostatic hyperplasia in elderly men with Homoeopathy- a series of eleven cases', 'A randomized double blind clinical trial of a Homoeopathic medicine in the treatment of trophic ulcer and neuropathy in leprosy' and 'A case of depressive disorder and tension headache' add further substance to this issue.

The Council humbly welcomes suggestions and feedback from the readers as these will certainly help us think better and move ahead on the path of promotion of Homoeopathy through various research activities. Best of Luck!

Prof. C. Nayak
